The International Coronelli Society for the Study of Globes is a non-profit organisation whose purpose is to foster the study of the globe as a specific cartographic form of expression, and to promote research on the globe and globe-related instruments in their historical and socio-cultural contexts. This includes activities such as drawing up inventories, conservation and restoration work, research on globe makers, as well as studies on the use of globes and of instruments such as armillary spheres, planetaria and telluria.

The society brings together collectors, researchers, museum curators, conservators and dealers as well as institutions owning globes, and libraries. Founded in Vienna in 1952, the society is among the oldest ones dedicated to the history of cartography, and the only one exclusively devoted to globes.
Preface
